

Sophia (Zahra) Chehrehghan

Spatial Planner · GIS & GeoAI

Bochum, Germany · +49 176 30579604

zahra.chehrehghan@tu-dortmund.de

Portfolio: sophia-chehre.github.io · LinkedIn: linkedin.com/in/sophia-chehre

PROFILE

Spatial planner combining GIS and GeoAI workflows with an urban planning perspective. I extract, refine, and interpret spatial data, and connect technical GIS processes with real-world planning and project coordination contexts.

SKILLS & TOOLS

GIS & GeoAI

ArcGIS Pro (Image Analyst, Spatial Analyst, deep-learning workflows)

ArcGIS Online (Web Maps, Instant Apps)

Aerial imagery analysis, feature extraction, output refinement

Spatial & Analytical Workflow

Transfer learning, semantic segmentation, raster analysis, weighted overlay, attribute filtering, model evaluation

Planning & Coordination

Airtable (project planning & tracking)

Miro (collaborative planning & structuring)

Web

HTML, CSS, GitHub Pages

LANGUAGES

English — Fluent

German — B1 (CEFR)

Persian — Native

EDUCATION

MSc Spatial Planning

TU Dortmund · Present

Coursework completed; master's thesis open.

Certificate in Digital Technology Management (DLab)

TU Dortmund · 33.5 ECTS · Completed June 2025

Three-semester interdisciplinary programme in digital innovation, lean start-up, venture creation, and strategic technology management.

MSc Urban Planning

Iran University of Science and Technology · 2019

SELECTED GIS & GEOAI PROJECTS

Building Footprint Extraction using Transfer Learning

ArcGIS Pro · ArcGIS Online · Independent project

- Fine-tuned a pretrained deep-learning model with custom training samples for building detection from aerial imagery.
- Generated training chips and refined model outputs; evaluated detection performance.
- Published results as a web map and Instant App via ArcGIS Online.

Land Cover Classification using GeoAI (Semantic Segmentation)

ArcGIS Pro (Image Analyst) · ArcGIS Online · Independent project

- Applied a deep-learning segmentation model for high-resolution land-cover classification.
- Classified raster imagery, refined outputs, and evaluated results.
- Shared findings through interactive web maps and Instant Apps.

Landslide Risk Assessment using Spatial Analysis

ArcGIS Pro (Spatial Analyst) · ArcGIS Online · Independent project

- Integrated multiple raster layers (slope, land cover, infrastructure) for multi-criteria spatial analysis.
- Applied weighted overlay analysis to identify high-risk zones.
- Delivered results through an interactive web application.

EXPERIENCE

Research Assistant — Circular Rental Model Pilot

CSCP, Wuppertal, Germany · Four-month pilot project (Oct 2025 – Jan 2026)

- Interdisciplinary student team on a Catalyst Centre business pilot project with Krefeld Business — designing an incentive-based Circular Rental Model for the future Startup Centre Krefeld.
- Contributed to good-practice research, co-creation of tenant commitments and incentive mechanisms, and stakeholder engagement with qualitative interviewing for validation.
- Co-developed the final outputs: Circular Rental Agreement Prototype and Implementation Roadmap.

Cofounder & Researcher

RohamRobotic, Tallinn, Estonia · 2021 – 2023

- Part of a five-person founding team developing an early-stage venture concept through validation, competitor research, MVP-stage work, and pitch preparation.

Project Coordinator

ReMoLab, Remote (Paris) · 2021 – 2022

- Coordinated a pre-incubation programme supporting early-stage startups; managed project planning, task tracking, and team structuring using Airtable and Miro.
